AWARENESS ON ORAL HEALTH AND DENTAL SCREENING CAMP

Date:27.04.19

Venue: Kothalanka

Faculty: Dr.Kondala Rao

Number of students attended: 10

SUMMARY:

By putting the old saying "PREVENTION IS BETTER THAN CURE" into practise, it became clear that entering the dangerous world of tobacco abuse would lead to a downward spiral of declining financial stability and negative health. They were given an academic explanation of the range of illnesses brought on by tobacco use in order to dispel any lingering doubts they may have had about the subject.

There were 50 women and 60 men in the 110 participants that were screened. An age range of 6 to 50 years was present in the population that was screened. An extremely high prevalence of dental caries and dental plaque-induced gingivitis was observed, which is in line with the screening results' broad findings.

**PREVENTIVE ORAL HEALTH AWARENESS AND DENTAL
SCREENING CAMP**

**Date:13.03.19
Botlakurru**

Venue: Gram Panchayat,

Faculty: Dr.Rama Sharma

Number of students attended: 8

SUMMARY:

In order to effectively spread the practises for maintaining good oral health, the Department of Pediatric Dentistry organised an oral screening camp. There were disturbingly high incidence rates for dental caries, generalised chronic periodontitis, and plaque-induced gingivitis.

Education of youngsters on the value of maintaining good dental health was the aim of the Department of Pediatric Dentistry. The many benefits of preventing drawing up from a balanced diet, oral hygiene practises that included the ideal brushing technique, interdental and tongue cleaning, and routine dental consultations were meticulously explained in order to encourage people to start, instil, and practise the same until the day it becomes a daily routine.

AWARENESS ON SWACHH BHARAT AND DENTAL SCREENING CAMP

Date: 19.02.19

Venue: Ederapalle

Faculty: Dr.Rama sharma

Number of students attended: 10

SUMMARY:

The Department of Public Health Dentistry at Kims Dental College held a camp with a focus on the Swachh Bharat campaign, a gumption-laden programme of the Indian government, as well as routine dental screenings. 150 persons in all were screened, of which there were 90 girls and 60 boys. The age range of the tested population was 6 to 17. Inferring from the screening results, a very high prevalence of dental caries and dental plaque-induced gingivitis was found.

The Swachh Bharat movement is gaining momentum as a clever effort momentum on a national scale, and this effort sought to speed up this kindling inferno. The importance of cleanliness to health was outlined in lucid detail, and it was highlighted that it was the strongest weapon available to fight off the alarmingly increasing diseases and infections.

TOBACCO AWARENESS AND DENTAL SCREENING CAMP

Date:30.01.19
Cheyyeru

Venue: Gram Panchayat.

Faculty Dr.Kondala Rao

Number of students attended: 5

SUMMARY:

The Department of Public Health Dentistry planned a dental screening camp in conjunction with a programme to reduce tobacco use, abuse, and misuse. The group being screened ranged in age from 15 to 30. Out of the 78 people screened, 40 were men and the remaining were women. Upon screening, excessive amounts of gingivitis caused by tooth plaque and dental cavities were discovered. It goes without saying that today's descendants will make up tomorrow's present. In keeping with this philosophy, a vigorous campaign against cigarette use was directed toward the society's brightest young people. They were taught in a captivating and logical way how to avoid being seduced by the egregiously unjust social demagogue of tobacco.

More attention was placed on the well-known effects of tobacco and its ability to cause cancer.

CLEANLINESS AWARENESS AND DENTAL SCREENING CAMP

Date:08.12.18

Venue: Kothapalle

Faculty: Dr.V.Kondala Rao

Number of students attended: 08

SUMMARY:

The Department of Public Health Dentistry, Kims Dental College, arranged a camp that included routine dental screenings and a strong message about living a life that is uplifting and encapsulating the notion of cleanliness. There were 110 men and 70 women out of a total of 180 participants that were screened. The age range of the tested population was 20 to 77. The universal screening results showed an extremely high prevalence of dental caries, chronic generalised periodontitis, and dental plaque-induced gingivitis.

The unclean practices that do not adhere to the paradigm of hygiene and sanitation must be stopped since they are alarmingly being carried out in unparalleled quantities. Initiating and maintaining practises that scream cleanliness was also encouraged, along with a frank and tenacious tenacity and resolve.

AWARENESS ON CHRONIC STRESS AND DENTAL SCREENING CAMP

Date:24.11.18

Venue: Allavaram

Faculty: Dr.Kondala Rao

Number of students attended: 10

SUMMARY:

The Department of Public Health Dentistry conducted dental screening camp along with providing adequate knowledge regarding the chronic stress being underwent by the present-day generation. Of the 90 people screened, the gender distribution was almost the same and were between the age of 10-30 years. The major findings observed are the dental caries and the Chronic Generalized Gingivitis.

There is no need for conscious reflection to recognize the rising incidence of stress in society. This overarching, pernicious state of mind, which has stumbled to its apotheosis in society and is now tying everyone from toddlers to octogenarians to it, is the result of various aspects of daily life. The negative and decadent effects it has on human beings' ability to function healthily were carefully explained. Chronic long-term systemic problems and stress-induced exacerbations of diseases were highlighted.

ORAL HEALTH AWARENESS AND SCHOOL DENTAL CAMP

Date:27.10.18

Venue: Samanasa

Faculty: Dr.Rajavardhan

Number of students attended: 7

SUMMARY:

A dental screening camp and an oral health awareness campaign were organised by the departments of paediatric dentistry and public health dentistry. 53 children between the ages of six and twelve received screening. The exact ages of the boys and girls were precisely noted as 32 for the girls and 21 for the boys. Additionally, a few records of malocclusions, enamel hypoplasia, and congenitally missing teeth were made, along with a few records of dental caries and gingivitis brought on by dental plaque.

AWARENESS ON TOBACCO USE AND DENTAL SCREENING CAMP

Date:04.09.18

Venue: Kamanagaruvu

Faculty Dr.RamaSharma

Number of students attended: 10

SUMMARY:

A campaign to prevent tobacco use, abuse, and misuse was designed in conjunction with a dental screening camp by the Department of Public Health Dentistry. The age range of the group being screened was 6 to 18. 127 men and 193 women out of the 300 persons that were screened were present. Following screening, it was found that there were significant numbers of dental cavities and gingivitis brought on by tooth plaque. It goes without saying that the present of tomorrow will be composed of today's offspring. In line with this attitude, a ferocious anti-smoking campaign was launched against the brightest young people in society. They were instructed on how to avoid falling prey to the tobacco industry's egregiously unjust social demagogue in a fascinating and reasoned manner.

They were instructed on how to resist being tempted by the egregiously immoral social rhetoric of tobacco use and the relentlessly depressing downward spiral they would experience if they chose to travel down this forbidden path in an engaging and deliberate manner. Additionally, they were urged to have bravery and vigorously spread this message if they came across any members of this hall of slander.

ORAL HEALTH AWARENESS AND SCHOOL DENTAL CAMP

Date:-18.08.18

Venue:Pithanivaripalem

Faculty: Dr.Rama sharma

Number of students attended: 8

SUMMARY:

The Department of Public Health Dentistry organised a dental screening camp and a lively discussion of the complexity and various facets of oral health. A few recherche records were made, such as those of congenitally missing teeth, enamel hypoplasia, and malocclusions, in addition to a lot of records of dental plaque-induced gingivitis and dental caries. Oral ailments were adamantly asserted to be serious, and the importance of keeping good oral health was emphasised. The importance of the mouth cavity's involvement in mirroring and modulating systemic disease was constantly emphasised to the audience.

PREVENTIVE ORAL HEALTH AWARENESS AND DENTAL SCREENING CAMP

Date:14.07.18

Venue: ZP high school,Amalapuram

Faculty: Dr.Kondala Rao

Number of students attended:12

SUMMARY:

An oral screening camp was organised by the Department of Public Health Dentistry to create a widespread awareness of preventative oral health care practises. Alarming high prevalence rates were seen for gingivitis brought on by dental plaque, chronic generalised periodontitis, and dental caries.

To teach kids the value of maintaining good oral health was the Department of Public Health Dentistry's mission. The many benefits of preventing drawing up from a balanced diet, oral hygiene practises that included the ideal brushing technique, interdental and tongue cleaning, and regular dental consultations were meticulously explained in order to encourage people to start, instil, and practise the same until the day it becomes a daily routine.
